

# SeCure SoHo™

All-in-one Security

SeCure SoHo

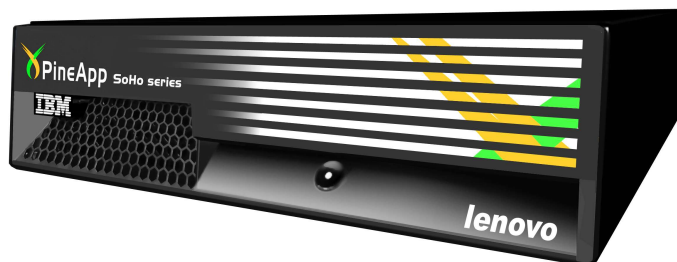

## Company Profile

PineApp™, a leader in securing networks and email systems, offers comprehensive appliance solutions for small, medium and large organizations.

PineApp's products are well known in the industry and have received very positive reviews, positioning them as leaders in their field.

Founded in 2002, PineApp is headquartered in Israel, with branch offices in the US, UK, Italy, Spain, France, Russia and South Africa.

In the past five years, PineApp has specialized in email and content security systems and already has significant presence in more than 50 countries. This specialty enabled PineApp to establish itself as a pioneer in developing unique and innovative engines to fight the different threats.

PineApp SeCure SoHo appliance offers a complete all-in-one UTM (Unified Threat Management) solution for small organizations. SeCure SoHo combines the best of PineApp Mail-SeCure product with a powerful Firewall and Internet surfing filtering mechanism.

SeCure SoHo allows organizations of up to 50 users to be protected in all aspects, such as electronic mail and Internet browsing, using a self-maintained, auto-updated solution.

**Network Protection Suite - SeCure SoHo** provides a sophisticated UTM solution, including PineApp's mail security system and a powerful yet easy to use stateful packet inspection Firewall. It offers a powerful perimeter security mechanism to protect against mail bombing, DoES (Denial of Email Services attacks), Spam, Viruses and all various email and Internet based threats.

**Anti-Spam Engines - SeCure SoHo** has an advanced eleven-layer Anti-Spam engine enhanced by Recurrent Pattern Detection (RPD™) technology. All incoming mail undergoes an in-depth analysis by the different Anti-Spam layers. SeCure SoHo identifies 98.5% of incoming Spam and immediately blocks or tags it as Spam, in accordance with the organization's policy. By combining Anti-Spam technologies with advanced policy management, PineApp SeCure SoHo reduces the false positive ratio to almost zero.

**Anti-Virus Engines - SeCure SoHo** incorporates five Anti-Virus engines; SeCure SoHo's unique Heuristic worm-detection engine, coupled with three F-Secure™ award-winning Anti-Virus scanning engines, and PineApp's unique Zero-Hour™ outbreak detection engine to identify and block new-age Viruses and Worm outbreaks within minutes. Together, these engines provide full protection against known and unknown email and web based threats, such as Viruses, Worms and Malicious-code, while receiving mail and while browsing or downloading files from the Internet.

**Web Access Control - SeCure SoHo** provides over 40 classified website (URL) categories to prevent employees from accessing non-productive (gambling, entertainment etc.) or inappropriate (pornography, drugs etc.) content.

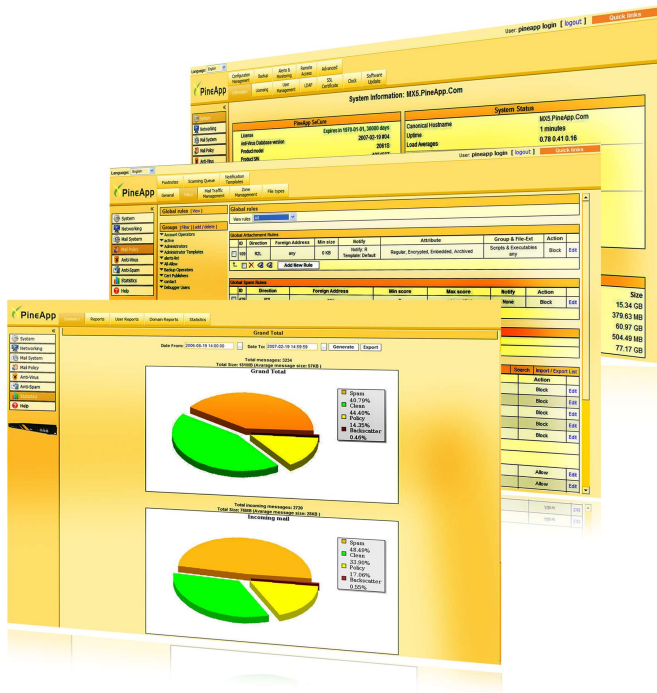

**VPN - SeCure SoHo** includes a VPN server (PPTP-based) with encryption support, which enables employees to connect to the organization from a remote location in a safe manner.

**Policy Management - SeCure SoHo's** innovative Policy Management mechanism enables administrators to define rules for the entire organization. This flexibility enables the system administrators to enforce the organization's policy for both incoming and outgoing mail flow. SeCure SoHo can smoothly interconnect with existing directory services using the LDAP protocol.

## Other Features

**Mail Traffic Management** - In order to lower administrator overhead, mail flow can be managed by administrators or users. The system can be configured to send daily mail traffic reports to users. From within these reports users can view their mail traffic, manage their blocked Spam and control their own Black & White lists.

**Mail Server (optional)** - SeCure SoHo has an optional mail server module in which mailboxes can be created and managed using a friendly, simple interface. The web-access feature enables all users to read their mail from anywhere in the world. SeCure SoHo can currently be found in 43 different interface languages.

## Benefits

### Automatic Updates

SeCure SoHo is an auto-updated self-maintained system, requiring minimal management resources, guaranteeing maximum reliability. All software and signature updates are automatically applied without any required manual intervention, saving time and increasing efficiency.

### Easy to manage

SeCure SoHo provides a smooth web-based user interface, enabling easy administration, maintenance and configuration. User-friendly informative logs and statistics are easily produced, enabling the administrator to receive accurate details of the organization's mail and web traffic.

### Affordable

SeCure SoHo is a comprehensive all-in-one appliance. There is no need to purchase each solution separately, thus substantially lowering costs and saving money.

Series Comparison	1210	1220
Licensing (mail users)	25	50
Inspected Protocols	SMTP, POP3, HTTP and FTP (including Transparent modes)	
Mail Services Protocols	ESMTP/S, POP3/S, IMAP4/S, WebAccess*
